ABSTRACT

Analysis of the reading and math California Achievement Test performance of participants in compensatory reading and math programs in the Atlanta, Georgia, public schools is consistent with previous findings. The lowest performing students were selected to participate, and although the level of their performance was well below the national norm and the level of those ineligible to participate, their reading and math gains were greater. In the elementary schools, the program used the pull-out model, in which additional instruction in reading and math was given. In the middle schools or high schools, the program used the teaming or substitution method, in which compensatory instruction was the only daily reading or math instruction. Over 80 percent of program participants were taught by the eclectic approach, which involved everything from instruction in the basal or instruction supplemental to the basal, to a separate instructional plan. The remainder were taught using one of a variety of programmed approaches to individualized instruction. No one approach was found to produce consistently higher gains among students. (CMG)

DESCRIPTION OF PROGRAM

Introduction

In order to provide one compensatory program in the Atlanta Public Schools during the 1980-81 school year, federal and state compensatory funds were combined. The federal funds were granted under Title I of Public Law 89-10, as amended, of the Elementary and Secondary Education Act (ESEA), and the FY '81 Part A allocation of $8,117,000 was made on the basis of the number of children living within the zone boundaries of the Atlanta Public Schools who were from families receiving aid to dependent children (AFDC). The State Compensatory Education Program (CEP) allocation of $1,675,548 was made on the basis of the number of Atlanta Public Schools' fourth graders who mastered less than 15 reading objectives on the Georgia-Criterion Referenced Tests (GCRT) the previous year.

The Title I funds were targeted for the compensatory reading and mathematics programs in elementary, middle, and high schools. The CEP funds were limited for use with grades one through eight. Careful consideration was given to determine the best method for using the CEP funds at the specified grade levels while creating a minimum effect on Comparability,* a Title I requirement. The decision was to use the CEP funds to pay approximately one-fourth the salaries of the compensatory teachers and aides in the elementary schools. The Title I funds were used to pay the remaining salaries of the compensatory teachers and aides in the elementary schools, the total salaries of the compensatory teachers and aides in the middle and high schools, and the supervisory staff. In addition, the Title I funds were used to provide instructional materials and supplies for all students served.

*Schools receiving Title I funds were required to be comparable to schools not receiving Title I funds with regard to the teacher-pupil ratios and the certification levels of the teachers and administrators.

Schools Served

All schools which had at least 25 percent of the students receiving free or reduced-price school lunches were eligible for Title I funds during FY '81. All elementary, middle, and high schools with the exception of three were eligible and served. The three which had no federal and State funded compensatory programs were Jackson Elementary School, Smith Elementary School, and Northside High School.

Selection of Participants

Students in grades 1 through 9 were selected for participation on the basis of their performance on the California Achievement Tests (CAT). To be eligible, students in grades 2 through 9 were required to score at least one year below grade level at the time of testing, and the students in the first grade were required to be at least one-half year below grade level.

The Reading Vocabulary subtest of the CAT was used to select students for compensatory reading, and the Mathematics Concepts and Applications subtest of the CAT was used for compensatory mathematics selection. The scores were ranked, and those with the lowest scores had priority. Students received both compensatory reading and compensatory mathematics instruction if they were eligible in both subject areas.

Instructional Models

Instructional models for compensatory instruction were defined under Title I guidelines. Primarily, the Atlanta Public Schools made use of three models: (1) the pull-out model in the elementary schools and (2) the teaming or substitution models in the middle or high schools.

In the pull-out model, the students were taken from their classrooms for a daily period of compensatory instruction in a resource room setting. This instruction was in addition to the classroom reading and mathematics instruction. However, Title I guidelines allowed no more than 20 percent of the total daily instructional time to be used during the pull-out. This created difficulties if students received both compensatory reading and compensatory mathematics instruction. In schools in which there were no resource rooms available for compensatory instruction due to overcrowding, the Title I staff went into the regular classroom and instructed the Title I students. This was referred to as mainstreaming. Both the pull-out and mainstreaming were used in the elementary schools.

In the teaming or substitution models, a Title I teacher was paired with a general-funded teacher. In the teaming model, eligible students were taught compensatory reading or mathematics by the team of two teachers and an aide. In the substitution model, the students were divided into two groups. Each teacher was assigned one of the groups and the teachers shared the services of the aide. The compensatory instruction was the only daily reading or mathematics instruction for the participants. These models were used primarily at the middle and high school levels.

Methods of Instruction

There were two methods of compensatory reading and mathematics instruction: (1) the eclectic approach made use of a variety of commercial and teacher-constructed materials, kits, books, workshops, and audio-visual equipment in individualizing the instruction of participants; and (2) the programmed approach to individualized instruction made use of a management system, extensive hardware, and specifically designed instructional materials.

The programmed materials and the schools using them are indicated in Table 1. All schools not listed made use of the eclectic approach. However, some schools listed used the eclectic approach in certain grade levels and the programmed approach in others.

EVALUATION

Compensatory Reading Performance by Grade Level

Approximately 82 percent of the 12,037 compensatory reading participants who were administered the CAT were instructed using the eclectic approach. The remaining 18 percent were taught using programmed materials. When the performance on the Reading Comprehension subtest of the CAT was reviewed by grade level and instructional approach as indicated in Table 2, no one approach was found to produce consistently higher gains among students. At the second and eighth grades, the highest grade equivalent (GE) gains were achieved by the eclectic approach; at the third and sixth grades, Prescription Learning Centers (PLC); at the fourth and seventh grades, Gould Laboratories; at the fifth grade, Verbal Skills Centers (VSC); and at the ninth grade, EDL Learning 100. When the reading performance was summarized by elementary, middle, and high school, the GE gains ranged from one year

(1.0) to one year, four months (1.4) among the various instructional approaches. At the middle school level, the gains in both the eclectic approach and the Prescription Learning Center were one year (1.0). At the high school level, the range was eight months (0.8) to one year, four months (1.4) gain.

When reviewing reading comprehension gains in terms of normal curve equivalent (NCE) scores, the elementary range was 6 to 7, the middle school range was 2 to 4, and the high school range was 1 to 5. The 1981 NCE scores on reading comprehension for elementary, middle, and high school participants, using the various approaches, ranged from 30 to 38. Since the national norm in NCE is 50, this indicates the students were functioning at a level below the norm, but were gaining.

Compensatory Mathematics Performance by Grade Level

Eighty-six percent of the 10,246 compensatory mathematics students who were administered the CAT were instructed using the eclectic approach. The remaining students were either in PLC, EDL, or Innovative Sciences labs, or received Instrumental Enrichment (IE) two periods per week and the general compensatory mathematics instruction the remaining three.

As indicated in Table 3, the comparatively small number of students in Prescription Learning Centers had the highest GE gains on the Mathematics Computation subtest of the CAT in grades four, six, seven, and eight. In grade three, those using the eclectic approach had the highest gains; in grade five, Instrumental Enrichment; and in grade 9, Innovative Sciences. (Only the eclectic approach is reported for grade two since fewer than 15 pupils participated in either IE or PLC.)

When reviewing the data summarized by elementary, middle, and high school over the various approaches, the mathematics computation gains in GE ranged from one year (1.0) to one year, eight months (1.8). In terms of NCE, the gains ranged from 5 to 13 for a 1981 mathematics NCE performance range of 28 to 42. It should be noted that the highest 1981 mathematics NCE gains were at the elementary level and the lowest at the high school level.

As in reading, the compensatory mathematics students' performance was well below the national norm, but the average mathematics gains were high.

Reading and Mathematics Performance by School

The reading and mathematics CAT performance of the students who participated in the compensatory components as well as the performance of the students who did not participate are listed alphabetically by school in the categories of elementary, middle, and high in the appendix. For each school, the reading performance table is presented first and is followed by the table indicating mathematics performance.

Conclusions and Recommendations

The analysis of the reading and mathematics CAT performance of participants in the compensatory reading and mathematics program funded by Title I and CEP is consistent with previous findings. The lowest performing students were selected to participate, and although the level of their performance was well below the national norm and level of those ineligible to participate, their reading and mathematics gains were greater.

Over 80 percent of both reading and mathematics participants were involved in the eclectic approach which included everything from instruction in the basal or instruction supplemental to the basal to a separate instructional plan. The various eclectic approaches should be defined, and data should be collected to determine which approach yields the greatest gains. In addition, close attention should be given to those schools making use of the teaming model in 1981-82 in order to identify problems and facilitate the instructional process.
